1 Phonology and Evolution from Modern Pseudo-French

	Labial	Coronal	Palatal	Velar	Glottal
Stop	b, b ^{fi}	d			
Nasal		n			
Fricative	φ β, ῦ	s z, θ ð	ççz	хχ	h
Fric. (r-coloured)	$\beta_{\rm \scriptscriptstyle R}$	$R_R = \sum_{i=1}^{n} \hat{R}_R$	c _r c _r		
Trill				R	
Approximant			ų ų̃, j̇	щщ	
Lateral Fricative		Ĩġ	Ã		

	Front	Back
Close	iĩi̇̃i, yỹ ỹ̈́ ÿ́	uũẫų
Near-close		
Close-mid	e ẽ ễ ẹ	o ô
Mid	ээ	
Open-mid	εεξε	õỗ
Near-open		
Open	a ą	ãã

Legend

 \tilde{V} = nasalised vowel, \tilde{V} = nasal vowel, V = any vowel (or, in conjunction with \tilde{V}/\tilde{V} , oral vowel) V = nasal consonant, \tilde{C} = nasalised consonant (e.g. $/\tilde{u}$ /, but not true nasals), C = any consonant.

Preliminary Changes

- 1. $g, w > u \langle r \rangle$
- 2. ∞ , $\tilde{\infty}$, $\tilde{\emptyset} > \tilde{y}$, \tilde{y}
- 3. 0 > 0
- 4. u > v / o
- 5. y > j / (#)V
- 6. $V_{\alpha} > \emptyset / \# V_{\alpha}$
- 7. lj, l $y > \lambda$
- 8. $j > q \langle y' \rangle$
- 9. w > y / _i
- 10. RR > B
- 11. SR, $\int R$, ZR, $\int R > S_R$, $\int R$, $\int R$, $\int R$
- 12. $NR > N_R$
- 13. K > M
- 14. $C > \emptyset / \# C$
- 15. $C > \emptyset / C_{\#}$
- 16. $k > x \langle c'h \rangle$
- 17. \int , \int ⁸, χ , χ ⁸ > ξ , ξ ⁸, χ , χ ⁸
- 18. $nt > n\theta$
- 19. t > d [d] ('hard /d/')
- 20. p > b [b] ('hard /b/')
- 21. $f, v, v^{k} > \varphi \langle f \rangle, \beta \langle b'h \rangle, \beta^{k} \langle \acute{v} \rangle$

Great Nasal Shift

- 16. $\tilde{V}l > \tilde{w}\langle w \rangle$
- 17. $V > \tilde{\tilde{V}} / [N\tilde{C}yy]_N#$
- 18. $V, \tilde{V} > \tilde{V}, \tilde{\tilde{V}} / [N\tilde{C}vw], [N\tilde{C}vw]_$
- 19. $\tilde{\mathfrak{d}}$, $\tilde{\tilde{\mathfrak{d}}}$, $\tilde{\tilde{\mathfrak{d}}}$, $\tilde{\tilde{\mathfrak{d}}}$, $\tilde{\tilde{\mathfrak{d}}}$, $\tilde{\tilde{\mathfrak{d}}}$, $\tilde{\tilde{\mathfrak{d}}}$ > $\tilde{\tilde{\mathfrak{e}}}$, $\tilde{\tilde{\mathfrak{e}}}$, $\tilde{\tilde{\mathfrak{d}}}$,
- 20. N, $\tilde{C} > \emptyset / V_{\#}$
- 21. $\eta, \eta > \eta$
- 22. $V, \tilde{V} > \emptyset / N N$
- 23. m, l, $\Lambda > \tilde{v} \langle v \rangle$, $\tilde{k} \langle l \rangle$, $\tilde{\Lambda} \langle l \rangle$
- 24. $\tilde{k}_{W} > \tilde{k}_{k} \langle l \rangle$

Intervocalic Lenition (/ V_V is implied)

- 22. x, s, z > h
- 23. ε , $\tilde{\xi}$, $\tilde{\Lambda} > \tilde{j} \langle \dot{\xi} \rangle$, \tilde{q} , \tilde{q}
- 24. $n\theta > n$
- 25. d, d, b, b > $\eth \langle d'h \rangle$, $\theta \langle t'h \rangle$, β , $b^h \langle bh \rangle$
- 26. $\phi > \beta / V_V$

Late Changes

- 26. C[+stop, -alveolar] $C_{\alpha} > C_{\alpha}$
- 27. $h > \emptyset / hV$
- 28. $\vartheta > \emptyset / C C$
- 29. V[-nasalised, -nasal] > 9 / #

1.1 Pronunciation, Allophony, and Stress

There is not a lot of allophony in UF, save that /x/ is realised as $[\chi]$ around back vowels and $[\varepsilon]$ elsewhere, e.g. $c'h\acute{u}r$ / $x\~{u}u$ / 'to shrink' is pronounced $[\chi\~{u}^{-v}]$. Furthermore, /h/ is $[\varsigma]$ before variants of /i/ and /y/, and [h] elsewhere.

The vast majority PF words are stressed on the last syllable of the root, e.g. ad'hór' to love' /a'ðɔ̃ɰ/, but $b'had'hór\acute{e}$ you (PL) love' /βa'ðɔ̃.ψɛ̃/. The stress is not indicated in writing, neither in actual texts,

nor in this grammar or in dictionaries. The main exception to this are names, which are generally stressed on the first syllable, and receive secondary stress on the last syllable, e.g. *Daúvníc'h* /ˈdɔ̃ʊˌnīx/.

The only exception to this rule are certain particles and irregular verbs, some of which have irregular stress; for instance, the forms of $e\dot{q}$ 'to be' are all stressed on the first syllable. Any such words that deviate from the norm will be pointed out in this grammar and in dictionaries.

Oral vowels before the stressed syllable are often somewhat muted or reduced, albeit still audible, and stressed vowels are lengthened if they are nasalised, e.g. the pronunciation of $ad'h\acute{o}r$, which we just transcribed as /a'ðɔ̃ɰ/, is actually closer to [a'ðɔ̃y-]. Word-final voiceless 'e' is always /ə̥/.

Oral vowels have a nasalised and nasal counterpart. /i/, /y/, and /u/ do not vary in quality when nasalised. /a/ is normally [a], but becomes [a] when nasalised or nasal. Similarly, /e/ becomes [ϵ], and /o/ becomes [ϵ]. Note that nasalised [$\tilde{\epsilon}$] exists, but it's rare. The quality never changes when going from nasalised to nasal. The schwa has no nasal(lised) counterpart. Lastly, oral vowel also have voiceless counterparts, whose quality is the same as that of the base vowel.

Furthermore, as indicated in that same example, word-final / ψ / is often realised as velarisation of the preceding vowel; the same, however, is not the case for / $\tilde{\psi}$ /. Initial / ψ / is sometimes elided after words that end with / ψ /, particularly in particles (e.g. $rv\acute{a}$ 'alas').

1.2 Orthography

The spelling of most UF sounds is indicated above; the less exotic consonants are spelt as one might expect. That is, /b, d, n, ϕ , s, z, h/ are spelt $\langle b, d, n, f, s, z, h \rangle$, respectively.

The vowels are mostly spelt as one might expect; nasalised vowels are indicated by an acute, and nasal vowels by a circumflex. The variants of /i, y, u, a, e/ are spelt with $\langle i, y, u, a, e \rangle$ as their base letters. Nasal /ē/ and /ē/ as well as Schwa are indicated by adding a dot below the $\langle e \rangle$; the vowel /o/ is spelt $\langle au \rangle$ or $\langle o \rangle$ for diachronic reasons; in the case of $\langle au \rangle$, the acute and circumflex are added to the $\langle u \rangle$. The diphthong /au/ is spelt $\langle au \rangle$. Oral /ɛ/ is rare and is spelt $\langle e \rangle$. Word-initially and word-finally, a grave instead indicates that the vowel is voiceless. Word-final voiceless /e/ is always /ə/, but confusingly, it is also just spelt $\langle e \rangle$, since $\langle e \rangle$ is already /ɛ/.

The 'hard' voiced b, d which are pronounced exactly like their regular counterparts, are normally also spelt $\langle b \rangle$ and $\langle d \rangle$. However, the dot is commonly used in dictionaries and grammatical material to distinguish between the two as they differ from one another in how they are lenited. Furthemore, a dot below or above a letter is commonly to indicate a variety of different things, depending on the letter:

- a dot below in *b*, *d* indicates that they are the 'hard' variants of the letter, which are pronounced the same, but lenited differently;
- a dot below in l indicates that it is palatal $/\tilde{A}/$ instead of alveolar $/\tilde{B}/$;

¹That is, unless the name ends in an obvious suffix, in which case the last syllable before any such suffixes receives secondary stress; however, this is generally quite rare.

²As is always the case in cases like this, hypercorrection is frequent, and $\langle au \rangle$ is often preferred word-initially, even if the PF root was spelt with $\langle o \rangle$. In general, UF speakers seem to prefer $\langle au \rangle$ over $\langle o \rangle$, except word-finally and after $\langle w \rangle$, except that in verb affixes, *au* is quite common word-finally. The sequence $\langle wau \rangle$ does not exist in UF.

³ Thus, a word-final $\langle e \rangle$ can be /e/, such as in *vvaúríhe* /ṽ: $\tilde{\Sigma}$ u $\tilde{\eta}$ i'he/ 'to remember', or /ə/, such as in *dale* /da $\tilde{\xi}$ ə/ 'table'. As a rule of thumb, it is usually /e/ at the end of verb stems—but not verb forms in general—and /ə/ elsewhere. Fortunately they are differentiated by a dot below in dictionaries: *vvaúríhe* and *ḍale*.

- a dot below in *e* indicates that it is a schwa;
- a dot below nasalised \hat{e} , \hat{e} indicates that they are $/\tilde{e}/$, $/\tilde{e}/$ instead of $/\tilde{e}/$, $/\tilde{e}/$;
- a dot above in $\dot{\xi}$ indicates that it is lenited / $\mathring{\jmath}$ /.

Thus, in non-grammatical writing, the following are indistinguishable:

- l can be palatal $/\tilde{k}/$ or alveolar $/\tilde{k}/$;
- *e* can be a schwa, or /e/;
- \acute{e} , \acute{e} can be $/\tilde{\epsilon}/$, $/\tilde{\tilde{\epsilon}}/$ or $/\tilde{e}/$, $/\tilde{\tilde{e}}/$;
- ç can be /ç/ or /j/.

Elided initial / ψ / is indicated by omitting the r in writing and attaching the word to the previous one with a hyphen, e.g. - $v\acute{a}$ 'alas'.

2 Accidence

2.1 Verbal Morphology

Verbs in UF are inflected for person, number, tense, aspect, mood, and voice. Verbal inflexion is mainly done by means of concatenating a vast set of prefixes onto a verb, with the occasional suffix and circumfix making its appearance. This chapter details these affixes, their meanings, uses, forms, and restrictions.

2.1.1 Active/Passive Affixes

UF has a set of active/subject as well as passive/object prefixes which can be used on their own or in combination with one another, though at most one active and one passive prefix may be combined with a verb.⁴ Table 1 below lists those prefixes, two of which are actually circumfixes.

Active	Sg	Pl
1st	j-	aú-/r-/w(y')ó
2nd	ф(е)-	b'h(y)(y')é
3rd m	l(e)-	l(e)-
3rd f	ll(a)-	ll(e)-
3rd n	S-	l(a)-
Infinitive		d(e)-

Passive	Sg	Pl
1st	ν-	aú-/r-/w-
2nd	d(е)-	<i>b</i> 'h(y)-
3rd m	<i>y</i> '-	lý-
3rd f	<i>y</i> '-	lý-
3rd n	sy-	lý-
Infinitive		à-/h-

Table 1: Active (left) and passive (right) verbal affixes.

A great degree of syncretism can be observed in the third-person forms. The gender distinction in the 3sG that diachronically resulted from gendered personal pronouns is almost non-existent in the plural; the reason for this development is that those forms are derived from the old dative form, which lacked this distinction altogether.

The ACT 1PL, 2PL forms are only distinguished from their passive counterparts by the presence of additional suffixes in the former. The 3SG N in the active and passive is derived from the PF demonstrative *ce and its variants; the 3PL N is derived from the other 3PL forms.

⁴Irrespective of whether they are personal or infinitive prefixes. For instance, it would also be illegal to combine e.g. the active infinitive prefix with the first person active singular prefix.

The 1PL prefix varies if there is a vowel following it: if it is any vowel that is not a variant of 'o', the prefix is realised as r- instead, e.g. ad'hór 'love' to rad'hór6' 'we love'. If the vowel a variant of 'o', the prefix is realised as w- instead, e.g. aub'heír6' 'obey' to wob'heír6' 'we obey'. Note that this also leads to a change in spelling: stem-initial $\langle au \rangle$ is changed to $\langle o \rangle$.

The INF PASS prefix \grave{a} - coalesces with any vowel following it: it becomes \acute{a} if it is followed by a non-nasal variant of 'a', e.g. $ad'h\acute{o}r$ to $\acute{a}d'h\acute{o}r$ 'to be loved'; \acute{a} if it is followed by a nasal variant of 'a', e.g. $\acute{a}nv\acute{e}$ 'give life to' to $\acute{a}nv\acute{e}$ 'to be animated'; and h- if it is followed by any other vowel, e.g. $aub'he\acute{i}r$ to $haub'he\acute{i}r$ 'to be obeyed'.

The parenthesised vowels are used if the prefix is followed by a consonant, e.g. dir 'say' to lledir 'they (F) say' and b'hydire' 'you (PL) say', but ad'hor to llad'hor 'they (F) love' and b'had'hore' 'you (PL) love'. The prefixes au- and a- retain their main forms if followed by a consonant, e.g. dir 'say' to audiro' 'We say' and au' to be said'. The exception to this is that 2PL b'h(y)- drops the y if followed by a glide, e.g. y'ir 'to hear' to b'hy'ire' 'you (PL) hear' (not *b'hyy'ire').

The y' in the suffix parts of the 1PL, 2PL ACT are dropped if the verb ends with a consonant, e.g. ad'hór to b'hád'hóré, or if it ends with a vowel that is a variant of 'o' in the case of the 1PL and 'e' in the case of the 2PL, in which cases the vowels are contracted and a level of nasalisation is added, e.g. vvaúríhe 'to remember' to b'hyvvaúríhé 'you (PL) remember' (not *b'hyvvaúríhy'é). In all other cases, the y' is retained, e.g. aúvvaúríhey'ó 'we remember'.

When multiple prefixes are used together, active prefixes precede passive prefixes, except that infinitive prefixes always come first, e.g. *ad'hór* 'love' to *jvad'hór* 'I love myself' (not **vjad'hór*) and *b'hy'ad'hóré* 'you (PL) love him/her', but *devad'hór* 'to love me' and *àb'had'hóré* 'to be loved by you (PL)'. Recall that at most one infinitive prefix may be used.

By way of illustration, consider the paradigm of the verb ad'hór as shown in Table 2 below. Since this word starts with a vowel, the parenthesised vowels in Table 1 above are not used. Furthermore, since it starts with a non-nasal 'a'-like vowel, the $a\acute{u}$ - prefix is realised as r- and the \grave{a} - prefix coalesces with the initial 'a' of the stem to form \acute{a} .

Active	Sg	Pl
1st	jad'hór	rad'hóró
2nd	ḍad'hór	b'had'hóré
3rd m	lad'hór	lad'hór
3rd f	llad'hór	llad'hór
3rd n	ý'ad'hór	lad'hór
Infinitive	dad'hór	

Passive	Sg	Pl
1st	vad'hór	rad'hór
2nd	ḍad'hór	b'had'hór
3rd m	y'ad'hór	lýaď hór
3rd f	y'ad'hór	lýaď hór
3rd n	ý'ad'hór	lýaď hór
Infinitive	ád	'hór

Table 2: Paradigm of the Verb *ad'hór*.

For comparison, the paradigm of the verb *vvaúrîhe* 'remember' is shown in Table 3 below. Since it starts with a consonant, the parenthesised vowels in Table 1 are used, and any prefixes that end with a vowel remain unchanged.

Active	Sg	Pl
1st	jvvaúríhe	aúvvaúríhey'ó
2nd	devvaúríhe	b'hyvvóríhé
3rd m	lẹvvaúríhe	lẹvvaúríhe
3rd f	llavvaúríhe	llẹvvaúríhe
3rd n	ý'vvaúríhe	lavvaúríhe
Infinitive	devi	vaúríhe

Passive	Sg	Pl
1st	vvvaúríhe	aúvvaúríhe
2nd	devvaúríhe	b'hyvvaúríhe
3rd m	y'vvaúríhe	lývvaúríhe
3rd f	y'vvaúríhe	lývvaúríhe
3rd n	ý'vvaúríhe	lývvaúríhe
Infinitive	àvvo	iúríhe

Table 3: Paradigm of the Verb vvaúríhe.

⁵ Diachronically, the base form of this prefix is *o-, whence e.g. *oad'hóró > rad'hóró and *oob'heíró > wob'heíró.

2.2 Tense and Aspect Marking

Tense in PF is marked by additional sets of affixes that are appended to the verb in addition to the active/passive affixes. There are two broad groups of such affixes: suffixes, which are appended to the end of the verb and replace the ACT 1PL, 2PL suffixes in those persons, as well as circumfixes and prefixes, which are inserted before the active/passive markers and replace the replace the ACT 1PL, 2PL suffixes in some cases.

2.2.1 Suffixed Tenses

The present anterior and preterite are formed by appending a set of suffixes to the verb. Table 4 below lists the suffixes for those tenses. The present anterior has a perfective aspect, while the preterite has an imperfective aspect. The former is commonly used to describe events that are completed—particularly events that occurred recently, hence the name—while the latter is used to describe events that are ongoing or habitual.

Present Anterior	Sg	Pl
1st	$-^{L}\acute{e}$	$-^L\hat{a}$
2nd	- ^L á	- ^L áḍ
3rd	- ^L á	- ^L ér
Infinitive		-á

Preterite	Sg	Pl
1st	$-^{L}\acute{a}$	-y'aû
2nd	$-^{L}\acute{e}$	-y'é
3rd m	$-^{L}\acute{e}$	$-^{L}\acute{e}$
Infinitive		-é

Table 4: Present Anterior and Preterite Affixes.

Neither tense distinguishes gender in the third person. All suffixes, except for the infinitive and 1PL, 2PL PRET, lenite any consonant *before* them, e.g. *bárḍáḍ* 'to be willing' to *jbárḍát'hé* 'I was willing' but *debárḍáḍá* 'to have been willing'.

Diachronically, the 1SG PRET is an interesting case; in EUF, it was originally *- \acute{e} , but it later changed to - \acute{a} to distinguish it from the 2SG, 3SG PRES ANT. The remaining forms—save the infinitives, which are derived from the tenses' definite endings by analogy—originated from the PF simple past tenses.

The table below lists the example paradigm of the verb *ad'hór* in the present anterior and preterite tenses. Observe that there is no difference between the 1PL, 2PL active and passive.

Active	Sg	Pl
1st	jad'hóré	rad'hórâ
2nd	ḍad'hórá	b'had'hóráḍ
3rd m	lad'hórá	lad'hórér
3rd f	llad'hórá	llad'hórér
3rd n	ý'ad'hórá	lad'hórér
Infinitive	dad'hórá	

Passive	Sg	Pl
1st	vaď hóré	rad'hórâ
2nd	ḍad'hórá	b'had'hóráḍ
3rd m	y'ad'hórá	lýad'hórér
3rd f	y'ad'hórá	lýad'hórér
3rd n	ý'ad'hórá	lýad'hórér
Infinitive	áď hórá	

Table 5: Present Anterior Paradigm of the Verb ad'hór.

Active	Sg	Pl
1st	jad'hórá	rad'hóry'aû
2nd	ḍad'hóré	b'had'hóry'é
3rd m	lad'hóré	lad'hóré
3rd f	llad'hóré	llad'hóré
3rd n	ýaď hóré	lad'hóré
Infinitive	dad'hóré	

Passive	Sg	Pl
1st	vaď hórá	rad'hóry'aû
2nd	ḍad'hóré	b'had'hóry'é
3rd m	y'ad'hóré	lýaď hóré
3rd f	y'ad'hóré	lýaď hóré
3rd n	ýaď hóré	lýaď hóré
Infinitive	áď hóré	

Table 6: Preterite Paradigm of the Verb *ad'hór*.

2.2.2 Introduction to Prefixed Tenses and Future I

The future tenses, that is, the Future, Future Anterior (a tense similar to the future perfect), as well as the Conditional, are formed by adding prefixes to the present forms. The prefix is the same in all persons and numbers, except that there is a separate prefix for the infinitive.

In the Future, much to the UF learner's dismay, this prefix can go in two separate positions: either before the person marker(s) or inbetween the person marker(s) and the stem. The former case is more common in speech, while the later is more literary and strongly preferred in writing and poetry as well as in formal speech. But even in informal speech, the Future I alone will still not be enough to get by, as the Conditional, a *very* common tense, is formed using the Future II.

First, let us examine the former, simpler case, commonly called the Future I. The prefix is $a\acute{u}$ - if the verb form after it starts with a consonant (except glides), $a\acute{u}r$ - in all other cases; e.g. $a\acute{u}jad'h\acute{o}r$ 'I shall love', but $a\acute{u}r\acute{y}ad'h\acute{o}r$ 'it will love'. In the infinitive passive, it contracts with the initial \grave{a} - or \acute{a} - to $\acute{a}u$ or $a\^{u}$, e.g. $a\^{u}d'h\acute{o}r$ 'to be about to be loved'. No contraction happens if the infinitive starts with $\^{a}$, e.g. $a\acute{u}r\^{a}nv\acute{e}$ 'to be about to be animated'. Since there is little point in writing a table for just the prefixes, Table 7 instead shows the Future I paradigm of the verb $ad'h\acute{o}r$.

Active	Sg	Pl
1st	aújad'hór	aúrad'hóró
2nd	aúḍad'hór	aúb'had'hóré
3rd m	aúlad'hór	aúlad'hór
3rd f	aúllad'hór	aúllad'hór
3rd n	aúrýad'hór	aúlad'hór
Infinitive	aúdad'hór	

Passive	Sg	Pl
1st	aúvad'hór	aúrad'hór
2nd	aúḍad'hór	aúb'had'hór
3rd m	aúry'ad'hór	aúlýad'hór
3rd f	aúry'ad'hór	aúlýad'hór
3rd n	aúrýad'hór	aúlýad'hór
Infinitive	aûd'hór	

Table 7: Future I Paradigm of the Verb *ad'hór*.

2.2.3 Consonantal Future II

The Future I paradigm is fairly straight-forward; unfortunately, the Future II is a lot worse: not only does the prefix vary a lot more, but it also changes based on whether the stem starts with a vowel or a consonant.⁷ Table 8 gives an overview over the more regular, consonantal Future II forms, which are before verb forms that start with a consonant.

Active	Sg	Pl
1st	jaúé	aúnraûaú
2nd	b'há(ẹ)	v́aúе
3rd m	aúr(ẹ)	laúaú
3rd f	aúr(ẹ)	laúaú
3rd n	aúr(ẹ)	laúaú
Infinitive	dẹè	

Passive	Sg	Pl
1st	vaúé	naú-
2nd	ḍá-	b'haú-
3rd m	y'aúr-	laúe
3rd f	y'aúr-	laúe
3rd n	saúr-	laúe
Infinitive	haú-	

Table 8: Consonantal Future II Affixes.

The diachrony of these forms is somewhat unclear. It would appear, however, that they result from a coalescence of the personal pronouns with forms of some auxiliary (likely PF *avoir*) as well as the PF future. It appears that the 2SG is derived from the formal PF 2PL pronoun, which is in line with the fact that the Future II is generally considered more formal than the almost colloquial Future I. The $\acute{\nu}$ in the 2PL ACT seems to be the result of metathesis.

⁶This form has no direct equivalent in English and is fairly hard to translate on its own.

⁷This is not a problem in the Future I, since the prefix is never adjacent to the stem.

Many verbs have a different future stem that is used in all future tenses (except the Future I); for example, the future stem of *vvaúríhe* 'to remember', is *vvaúríźe*; thus, we have *jvvaúríhe* 'to remember' but *jaúvvaúríźé* 'I shall remember'. Note also that these forms already include the active/passive affixes, which is why it's *jaúvvaúríźé* and not **jaújvvaúríźé* or **jjaúvvaúríźé*.

The future stem usually ends with a vowel, which is dropped if a suffix that starts with a vowel is added, e.g. *laúvvaúrížaú* 'they will remember', not **laúvvaúrížeaú*. As in the present, the dictionary form of the future stem is a verbal noun; thus, *vvaúríže* roughly means 'the act of being about to remember'.⁸

Some future stems are nasalising, which is the case if the final vowel is a nasal vowel; in such cases, the vowel is still dropped if a suffix is added, but if that suffix starts with a vowel, nasalisation is applied to it, e.g. in the case of dir, whose future stem is $dir\acute{e}$, we have $a\acute{u}nra\^{u}dira\^{u}$ 'we shall say': the $-a\acute{u}$ suffix is merges with the nasalisation of the final vowel to become $a\^{u}$. The ACT SG -e desinence becomes -e for such verbs, e.g. $a\acute{u}rd\acute{u}r\acute{e}$ 'he will say'.

Note that when more than one affix is used, at most one can be a future affix, e.g. <code>jaúsyvvaúríźe</code> 'I shall remember it' and not *<code>jaúsaúrvvaúríźe</code>. Generally, the active prefix will be the future affix, but it is possible to use the passive future affixes instead for emphasis e.g. <code>jy'aúrvvaúríźe</code> roughly 'him, I shall remember'; often, this is also used to aid in establishing a contrast to some other part of the sentence that does not have this inversion.

Since some of the passive future affixes also have suffix parts—unlike the present affixes, where the passive forms are all prefixes—we can end up with multiple suffixes in addition to multiple prefixes, in which case active prefixes, instead of simply preceding the passive ones, can be thought of as effectively 'wrapping' them, e.g. aúlaúvvaúríźey'ó 'we shall remember them', which contains laúvvaúríźe 'they will be remembered'.

Finally, as always, infinitive prefixes come first. If combined with other affixes, it will generally be the future affix, e.g. *haúlývvaúríže* roughly 'to be about to remember them' but, as with passive affixes, variations are possible for emphasis or contrastive power, e.g. *delaúvvaúríže*, which puts more emphasis on 'them'.

Table 9 below shows the complete Future II paradigm of the verb *vvaúríhe* 'to remember'; recall that the future stem is *vvaúríźe*.

Active	Sg	Pl
1st	jaúvvaúríźé	aúnraûvvaúríźaú
2nd	b'hávvaúríźę	<i>vaúvvaúríźe</i>
3rd m	aúrvvaúríźę	laúvvaúríźaú
3rd f	aúrvvaúríźę	laúvvaúríźaú
3rd n	aúrvvaúríźę	laúvvaúríźaú
Infinitive	devvaúríźè	

Passive	Sg	Pl
1st	vaúvvaúríźé	naúvvaúríźe
2nd	dávvaúríźe	b'haúvvaúríźe
3rd m	y'aúrvvaúríźe	laúvvaúríźe
3rd f	y'aúrvvaúríźe	laúvvaúríźe
3rd n	saúrvvaúríźe	laúvvaúríźe
Infinitive	haúvvaúríźe	

Table 9: Consonantal Future II Paradigm of vvaúríhe.

2.2.4 Vocalic Future II

There is another set of affixes, which are used with verb forms that start with a vowel. These are shown in Table 10 below. The suffix parts of these affixes are the same, but the prefix parts are quite different.

⁸As noted before, infinitive and gerund forms of future tenses are difficult to translate into English.

Active	Sg	Pl
1st	b'h(e)	aúnraûaú
2nd	dír(ẹ)	v́аúе
3rd m	ł(e)	laúaú
3rd f	èł(ẹ)	laúaú
3rd n	aúł(e)	laúaú
Infinitive	C	dęè

Passive	Sg	Pl
1st	vaú- é	naú-
2nd	ḍá-	b'haú-
3rd m	y'aúr-	laú(r)e
3rd f	y'aúr-	laú(r)e
3rd n	saúr-	laú(r)e
Infinitive	ĥaú-	

Table 10: Vocalic Future II Affixes.

Unlike the consonantal affixes, the vocalic affixes appear to be derived from the present and future tenses of the PF verb *aller*.

2.3 Irregular Verbs

2.3.1 The Conjugation of ed 'to be'

Present	Sg	Pl
1st	vy'í	aúsó
2nd	фe	b'heḍ
3rd m	le	lẹsó
3rd f	lle	llẹsó
3rd n	S	lasó
Infinitive		éḍ

Pres. Ant.	Sg	Pl
1st	ve	aúfý
2nd	дуf	b'hu
3rd m	leb'h	lefýr
3rd f	lle'bh	llefýr
3rd n	seb'h	lafýr
Infinitive	éfyḍ	

Preterite	Sg	Pl
1st	vet'h	weḍy'ó
2nd	ḍet'h	b'heḍy'é
3rd m	let'h	let'he
3rd f	llet'h	llet'he
3rd n	set'h	laet'h
Infinitive	ét	hed 'hed

Table 11: Paradigm of the verb *ed*.

The etymology of these forms is mostly from a gradual simplification of coalesced forms of the personal pronouns with the PF copula. To compensate for the fact that PF lacks certain forms that are present in UF, some of the forms were coined by analogy. For instance, the PRES ANT INF $\acute{e}fyd$ is derived from the PRES ANT stem *fy and the PRES INF $\acute{e}d$, and the same is true for the PRET INF $\acute{e}t$ 'hed.

For obvious reasons, the copula lacks passive forms. At the same time, the first person forms are manifestly derived from the first person passive pronoun, for unknown reasons.

Unlike nearly every other word in the language, all forms of the copula are summarily stressed on the first syllable.

2.4 Noun Morphology

UF has 4 declensions. A definite and indefinite vocalic declension, and a definite and indefinite consonantal declension. As their names might suggest, the former two are used for nouns that start with a vowel, and the latter two for nouns that start with a consonant. UF has no morphologically separate articles; rather, the old PF articles have been incorporated into the declensions. Furthermore, UF no longer has a gender distinction in nouns.

2.4.1 Declension

The table below shows the affixes of the definite and indefinite declensions. The declensions are mostly identical, except that, as with the conjugation of verbs, the consonantal prefixes often end in a vowel (marked below with parentheses), which are not present in the vocalic declension.

Definite	Sg	Pl
Nominative	lá- ^L	lé- ^L
Vocative	\emptyset - L	\emptyset - L
Partitive	dy^{-L}	dẹ- ^L
Accusative	y'i- ^L	sý- ^L
•••		
Inessive	dwá-	dwé-

Indefinite	Sg	Pl
Nominative	ŷn- ^N	ý- ^L
Vocative	/	/
Partitive	dŷn- ^N	dý- ^L
Accusative	s-L	S-
Inessive	dáhŷn-	dáhŷ-

Table 12: UF Declension.

Most of these forms cause lenition in the initial consonant of the noun, e.g. <code>dale</code> 'table' to <code>DEF ACC SG s'thale</code>; this lenition is blocked in the <code>INDEF ACC PL</code> due to the presence of a hypercorrected 's' in PF *ces, e.g. <code>s'dale</code> 'the tables (ACC)' (not <code>s'thale</code>, which is the singular), as well as in less commonly used forms such as the <code>DEF</code> inessive <code>dwáḍale</code> 'on the table'.

The INDEF NOM SG $\hat{y}n$ - prefix and some other forms nasalise nouns; as a reminder, this means that in nouns starting with d, the d is deleted, e.g. $\hat{y}nale$ 'a table'; it causes nasalisation in words that start with a vowel e.g. $ehy\delta$ 'shield' to $\hat{y}nehy\delta$ 'a shield.' The indefinite vocative does not exist, as that would make little sense. As lenition, nasalisation too is blocked in rarer forms, e.g. INDEF inessive $dah\hat{y}ndale$ 'on a table.'

The diachrony of these forms is mostly from the PF definite and indefinite pronouns, though some forms, such as the accusative, are borrowed from demonstratives instead (DEF from PF *celui and INDEF from PF *ce); the definite partitive forms are from the PF partitive article, and the indefinite forms are formed with an additional d- by analogy to the definite forms. The locative cases are combinations of the articles and PF prepositions.

Definite	Sg	Pl
Nominative	lát'hale	lét'hale
Vocative	t'hale	t'hale
Partitive	dyt'hale	dẹt'halẹ
Accusative	y'it'hale	sýť hale
Inessive	dwáḍalẹ	dwéḍalẹ

Indefinite	Sg	Pl
Nominative	ŷnalẹ	ýt'hale
Vocative	/	/
Partitive	dŷnalẹ	dýť hale
Accusative	st'hale	sḍalẹ
Inessive	dáhŷnḍalẹ	dáhýḍalẹ
